(2024 – 2026)

DECLARATION

We hereby declare that the project titled “CSR and Sustainability Assessment of Souls of Humanity NGO Using ESG and SDG Frameworks” submitted to GITAM School of Business, is a Bonafide record of original work carried out by us as a part of the course CSR & Sustainability - 24STGM7031 during the Term 8, MBA (2024-26).

We confirm that:

- This project is the result of our efforts and has not been submitted, either wholly or partially, for any other course or program.
- All data collected, analyses conducted, and interpretations made are based on our understanding and application of the methods taught in the course.
- All sources of information have been duly acknowledged.

We understand that any false claims or academic dishonesty may result in disciplinary action as per the institution’s rules.

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to all those whose guidance and support made the successful completion of this project possible.

I am especially grateful to Prof. Raja Phani Pappu, Dean, GITAM School of Business, Gandhi Institute of Technology and Management (GITAM), Visakhapatnam, for providing a conducive academic environment and constant encouragement throughout the course.

I owe my deepest appreciation to Dr Manjushree Paruchuru my project mentor at the GITAM School of Business. Her valuable insights, consistent guidance, and unwavering support throughout the duration of this project have been instrumental in shaping the quality and direction of my work.

I extend my thanks to the faculty, peers, and all respondents who contributed their time and responses for this study.

SOULS OF HUMANITY CSR REPORT

1. INTRODUCTION:

1.1 Organization Overview

Souls of Humanity is a non-profit entity, which was founded in 2018 and registered in 2019 under the Societies Act. The company focuses on solving serious social issues like poverty and social inequality using systematized and community-based projects to help in sustainable development.

The difference between Souls of Humanity and other organizations is the nature of its operations that remain grassroots. The organization is presently involved in seven major areas with more than sixteen ongoing projects that encompass education, health care, rural development, food provision, environmental sustainability, women empowerment, sports and disaster relief. These programs are aimed at producing a long-lasting effect because it is a counter measure to the problems in the society, instead of giving temporary relief.

One of the peculiarities of the organization is its autonomous funding system. In contrast to most NGOs, which are dependent on corporate funding of CSR, Souls of Humanity depends on a network of about 592 salaried individuals who contribute both in terms of finances and professional networks. The model guarantees financial self-sufficiency, uninterrupted mobilization of resources, and high internal commitments.

The flagship programmes of the organization are to support the poor children by educating them, driving food and basic goods, supporting women and empowering them, and assisting people when faced with an emergency like pandemic and natural disasters. In these endeavors, Souls of Humanity concentrates on maximizing the social impact whilst having a close relationship with the communities in which it operates.

1.2 Founder's Profile

Souls of Humanity is the organization created by S. Durga Ajay Kumar whose vision of the organization was formed with references to his personal experiences and social observations. He had a middle-class background and was able to observe directly how the unprivileged children were suffering to get access to basic needs like food, education and other basic requirements. These experiences are what gave him the impetus to begin meaningful social change at a young age in his life.

He founded the organization in his second year of BBA with two very small-scale projects initially in celebrating special occasions with the poor children by giving them food and gifts, and then offering them educational assistance in the rural farmlands. These early activities formed the basis of what would move to become a multi sectoral and organised organization.

Souls of Humanity has grown tremendously under him and currently operates in several sectors with several projects geared towards the development of communities. His strategy focuses on ensuring the greatest impact generation, awareness creation, and direct involvement in the community instead of relying on external corporate funding.

The founder has a great sense of collective responsibility and has developed a model that allows working professionals, volunteers and youth to participate. His leadership is characterized by the inclusivity, sustainability and grassroots level of impact, which upholds the organization as being focused on serving the needy

1.3 Vision

To create a society where poverty, social injustice, and inequality are eliminated, and every individual has the opportunity to live with dignity, equality, and access to basic necessities.

1.4 Mission

To uplift underprivileged communities through structured and impactful initiatives in education, healthcare, livelihood development, and social awareness, while maximizing sustainable impact and promoting community participation.

1.5 Core Philosophy

Service Orientation: Target underprivileged populations and communities with basic needs like education, medical care and livelihood assistance.

Sustainability Focus: Focus on long-term effects through effective resolution of causes of social problems instead of providing temporary alleviation.

Collective Responsibility: Invites salaried employees, volunteers and youth participation which develops a common responsibility model of social change.

Grassroots Approach: On-the-ground work with communities to get an insight into actual needs and create need-based interventions.

Impact Maximization: Desire to make social impact as much as possible by using the resources effectively and well-designed activities.

Youth Empowerment: Firm conviction in engaging young people as the main agents of change by being aware, young people participating, and empowering through skills.

2. GOVERNANCE STRUCTURE & MANAGEMENT

2.1 Organizational Structure and Leadership

Souls of Humanity is a non-profit organization that was founded in 2018 and registered in 2019 under the Societies Act. It runs in a mission-oriented manner and has quite a loose governance structure, which is focused on social impact and implementation rather than on strict institutional structures. Its leadership is centralized with Founder and President being one and the same person who is fully engaged in the NGO on a fulltime basis. Founder is very important in the strategic direction and day-to-day running of the organization, in a way that the vision of the given organization is properly translated to actions. It has about 580 salaried members and benefits by the work effort, networks, and engagement in different activities with volunteers and community members as an added final pillar.

2.2 Decision-Making and Management Approach

The decision making process in Souls of Humanity is semi-centralized. Although the Founder has the last say, the decision is usually arrived at after consultations with other team members and everyone can give their views before the action is taken. This model makes it possible to implement it faster and align to organizational objectives. Nevertheless, the lack of a clear hierarchy or departmental framework could inhibit delegation, and establish reliance on central leadership, particularly as the organization grows larger.

2.3 Financial Management and Funding Sources

The Founder is directly involved in financial management, which means that the Founder has a high degree of centralization of control over the funds of the organization. Donations are the

main source of funding and are mobilized using social media platforms especially Instagram and in personal and professional networks of the members. Government agencies and corporate CSRs do not fund the organization, leaving it highly dependent on voluntary contribution and online interaction to continue its activities.

2.4 Transparency and Stakeholder Communication

Souls of Humanity is partially transparent as it keeps records of donations and provides updates on its activities and impact on social media channels. Instagram (13.6K followers) serves as one of the important channels through which the stakeholders can be engaged, and awareness can be raised and communicated. As much as this practice assists in developing trust and visibility, the non-existence of the formal reporting systems like audited financial statements implies the possibility to work on the organized accountability procedures.

2.5 External Collaboration and Partnerships

The organization does not have formal collaborations with government agencies or corporate entities. Nevertheless, it sometimes collaborates with other NGOs in order to implement certain projects. This flexible model of collaboration enables the organization to reach wider and further without having to make long term institutional alliances.

2.6 Governance Challenges

The Souls of Humanity experiences various issues of governance even though it has a good grassroots presence. Lack of formal organization, clear roles and standard processes can also restrict the effectiveness and scalability of operations. Besides, the fact that a Founder concentrates the decision-making and financial control process, as well as relies on donation-based funding, is a challenge to long-term sustainability. It would be imperative to address these problems in order to enhance governance and contribute to the further development.

3. CSR Initiatives

3.1 Education Initiatives – Mission Vidya Vikas

The organization has an activity called Mission Vidya Vikas to improve access to quality education among the poor children and orphaned children. Knowing the importance of education in the social and economic growth, the project is not focused on academic achievement but an overall learning and intellectual growth.

The major study resources such as books and stationery packs in this program the organization provides the key study materials to the kids who do not have access to simple study materials. Furthermore, regular doubt-clearing sessions help to strengthen and enhance the intellectual awareness of the conceptual awareness and performance. Career counseling is another aspect of the program that helps the students explore what they are interested in and the ways that they will be able to plan their future educational and career paths. Other activities such as establishing libraries are also conducive to ensure that the learning environment is conducive.

This initiative plays a significant role in bridging of the education gaps and empowerment of children with education and skills. In the long term, it will assist in improved literacy rates, improved employability and general socio-economic uplift of the marginalized communities.

3.1.1 Impact Created

The program has been able to generate quantifiable results in the areas of reach, engagement, and academic support. In the level of output, it impacts directly around 80 students and there are 6 volunteers that it would need to join it regularly which translates to a consistent academic involvement. The program has 24 annual sessions to ensure concepts on key topics are reinforced many times over.

The outcome perspective states that there is an improvement in student grades but no actual documentation of the percentages. Nevertheless, on the basis of the number of times of engagement and targeted support of the subject, it can be assumed that students get about 48-60 hours of academic support every year (assuming 2-2.5 hours per session). This continued contribution helps in increased conceptual clarity and academic performance.

3.1.2 Impact Measurement

These measures provide an actual image on the extent of operations, but fail to provide a streamlined outcome-based measure. As a case in point, there are also the academic performance gains which are not quantified by the means of the percentage of change in marks, pass rates or scores of pass subject improvement. No statistical follow up of attendance rates, retention rates and student progress is also available.

This implies that the organization is now measuring the extent to which it has done, as opposed to the extent to which it has created change.

Activity	Indicator	Data
Academic Support	Students	80
Volunteer Engagement	Volunteers	6
Teaching Sessions	Sessions/Year	24
Learning Support	Teaching Hours	50
Continuous Support	Annual Hours	48–60

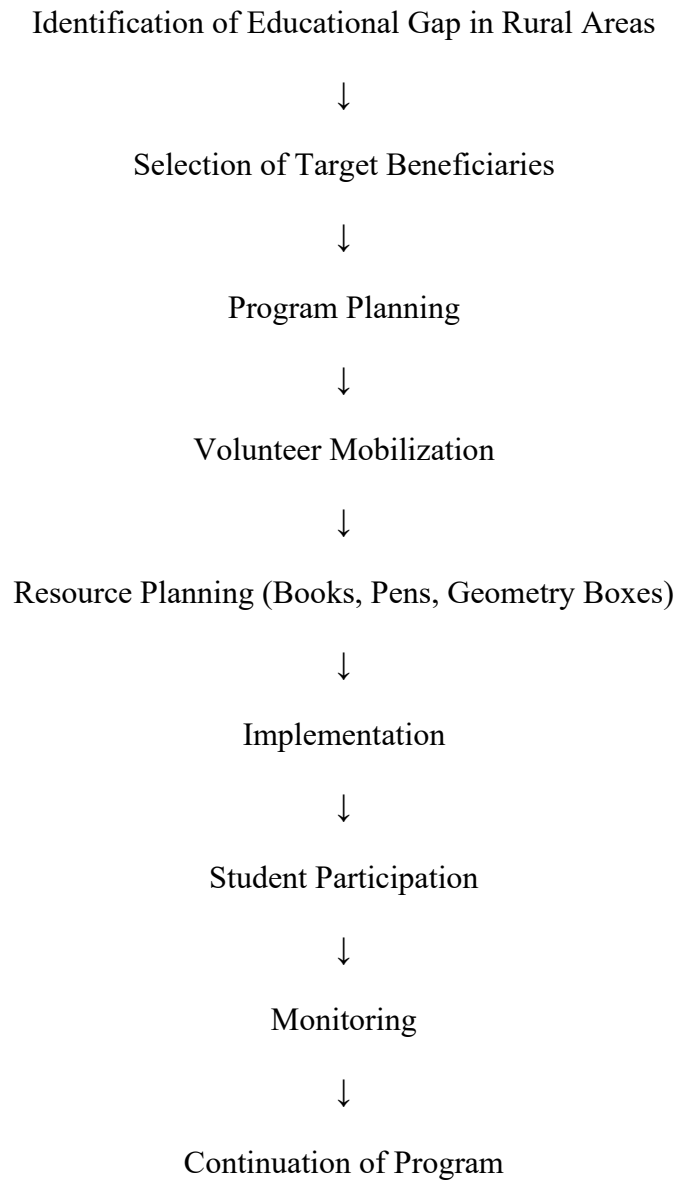

3.1.3 SDG Alignment

The project fits better into SDG 4: Quality Education, particularly concerning improving access to learning materials and academic assistance. The program has a contribution to educational development of about 24 structured learning interventions in a year to underserved students.

The program also helps to fulfil SDG 10: Reduced Inequalities since it focuses on rural and disadvantaged groups, and indirectly on SDG 1: No Poverty through enhancing future earning potential (through education).

Still, the absence of SDG-specific pointers such as the rise in the literacy rates, the transition rates, or the completion rates limits the ability to chart the impact of the initiative on global development standards in quantitative terms.

3.1.4 Process Flow:

3.2 Rural Development Initiatives

The rural development projects that Souls of Humanity has embarked upon aim at enhancing the overall living standards of the underdeveloped and under-served areas. Such programs have a holistic nature since they deal with various aspects of rural deprivation such as food, clean water, sanitation, healthcare and education.

One of the key areas of this initiative is women empowerment and by doing so, it engages in skill development and training courses to enable women to be more independent and capable of earning incomes. The organization develops financial independence through offering women practical skills and livelihood chances and developing socio economic growth of families and communities. Equally, allocation of essential amenities such as solar lights and basic infrastructure contributes to improvement of living standards in the rural locations. Not only that such interventions meet the immediate needs, they lead to long-term sustainability in the form of the capability of communities to become more self-sufficient and resilient.

3.2.1 Stitching Workshop Initiative under Rural Development

In 2023, Souls of Humanity introduced a stitching workshop project as a rural development and women empowerment project to the villages of Chipurupalli and Amadalavalasa. The project was to help uplift the livelihoods of the rural women by training them in income earning skills.

The action started with identification of women with economically disadvantaged backgrounds who were keen on the vocational skills acquisition. There were 25 beneficiaries who were all selected women in both the villages. Besides, the organization formulated a 25 days training

on stitching and rudimentary skills on tailoring, this meant that the great emphasis was put on practical studies.

In order to transfer skills effectively, the NGO invited the services of 4 trainers that worked to implement the sessions and gave constant guidance to participants. The money budget of the initiative was in total ₹4,00,000 which covered the costs of the trainers, purchase of the machines used in training process such as sewing machines among other training related costs. Implementation phase developed the day-to-day practical sessions where the participants were taught the art of stitching over the days through basic skills to more sophisticated uses of the given lesson. Certificates of completion were given at the completion program and were the official appreciation of their competencies and motivation to apply such talents in self-employment or source of income.

3.2.2 Impact Created

The initiative led to a tremendous transformation at the individual and social fronts. At the output level, 25 of the women had been effectively trained within 25 days period during which the women had been presented with a formal and practicable experience on stitching skills. The incorporation of 4 trainers made knowledge transfer and individual directions of the training smooth.

At the outcome level, participants gained some practical skills in stitching, became more confident and readiness to do income-generating activities. Machinery also made their learning easier and more proficient since the facilities were provided to them during the training. They have also used the certification to legitimize them to higher levels to enable them to explore new frontiers such as customization of the services or small-scale entrepreneurship.

The initiative in the long run leads to financial liberation, better potential income in the home, and socio-economic empowerment of the rural women. It also helps in community building since women can be empowered to be economically active and dependent.

3.2.3 Impact Measurement

The outcomes of the program are largely measured through the assistance of output measures like the number of beneficiaries (25 women), duration of the program (25 days) and number of trainers (4), the financial investment of 4 lakhs. The awarding of certificates also is an indicator of the success of the programs.

However, there is no real mechanism that can be used to track the outcome based indicators such as income generation upon successful completion of the training, employment or percentage of women actively using the skills learnt. There are no data as well concerning the long-term follow-up of beneficiaries or their economic progress. By this, evaluation of the effect has largely been qualitative and observational and has lacked a gap in the systematic, data-driven analysis.

Activity	Indicator	Data
Skill Training	Beneficiaries	25
Training Program	Duration (Days)	25
Capacity Building	Trainers	4
Resource Allocation	Investment (₹)	4,00,000
Area Coverage	Villages	2

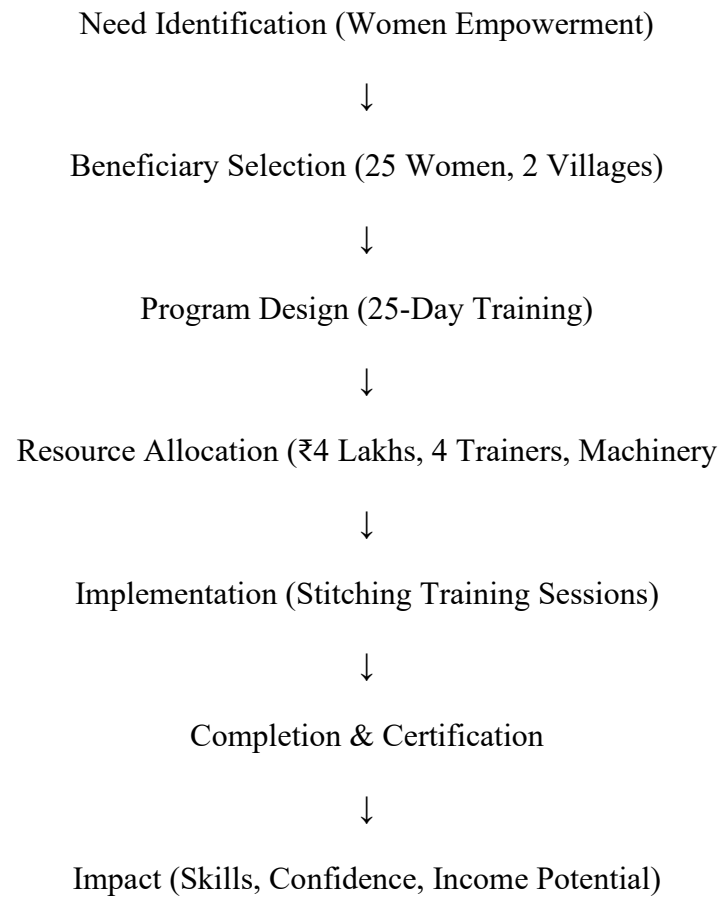

3.2.4 SDG Alignment

The initiative of the stitching workshop closely aligns with SDG 8: Decent Work and Economic Growth in that it aims at skills enhancement and employability measures among women in the rural areas. The program also helps in self-employment and earning power by imparting the participants on the realities of vocational training.

The other SDG that the initiative contributes to the realization of is SDG 5: Gender Equality since it empowers women by increasing economic opportunities and in strengthening the role of women in making decisions in the family. Moreover, it contributes to SDG 1: No Poverty, since the development of skills gives women an opportunity to increase their potential earnings and the quality of life.

These SDGs are highly corresponding, but since they do not include any quantifiable parameters, such as income indices, employment and new business formation, experience some challenges in the quantitative evaluation of the initiative to these global development goals.

3.2.5 Process Flow

3.3 Food & Basic Support Initiatives

One of the oldest programs of Souls of Humanity is the Food Distribution and Support Program which is aimed at combating hunger and enhancing the general well-being of the disadvantaged communities. One of the key elements of this program is the program of giving a smile on your special day, in which people donate at least around 5000 rupees to cheer up personal occasions by helping those who are in need.

According to such contributions, the organization strategizes and implements activities 4–5 times a month, which will guarantee frequent interaction with beneficiaries. The choices of beneficiaries are usually based on donor preferences with the contributors either giving to orphanages or the poor. The NGO is also actively affiliated or working with orphanages in other areas like Gajuwaka where most of these activities are carried out.

Its execution involves mobilizing food delivery campaigns whereby food is distributed to the needy. Other than food, the program has been expanded to support with the provision of clothing, stationeries and books, particularly to children in orphanages. The organization also holds competitions and engagement events of children and offers prize money, which helps to motivate them and advance their development as a whole. The NGO provides donors with videos and evidence of activities once they have been done to guarantee transparency and accountability.

3.3.1 Impact Created

The project has had a far-reaching and multi-dimensional effect as it has reached not only into the basic needs of beneficiaries but also in the developmental dimensions of beneficiaries. The number of beneficiaries has been about 3000, and this has happened in terms of food distribution, delivery of basic requirements and activities.

In the field of production, the program guarantees that meals, clothing, books, and stationery are distributed regularly, and that competitions and engaging events are conducted. On the outcome level, it leads to decreased hunger, better living standards and better education of children in orphanages.

Active involvement of competitions and activities based on awards deserves a significant role in enhancing confidence, motivation and emotional state especially in children. Moreover, the initiative would foster more awareness and community involvement because people are actively involved in welfare activities by performing their own celebrations.

3.3.2 Impact Measurement

The program assesses the effectiveness of the program mainly through the output measures including beneficiaries (3000 people), frequency of activities (4 -5 times per month), and minimum donor contribution (₹5,000). These are metrics that indicate the magnitude, steadiness, and financial influx behind the initiative.

But no systematic monitoring of specific metrics like meals delivered per drive, material delivered and long-term changes in beneficiary status. Also, the effects of such activities as competitions and support in learning are not quantitative. Consequently, the evaluation is mostly focused on reach and not outcome-based evaluation.

Activity	Indicator	Data
Food Distribution	Beneficiaries	3,000+
Program Execution	Activities/Month	4 - 5
Donor Participation	Min Donation (₹)	5,000

3.3.3 SDG Alignment

The project is also highly compatible with SDG 2: Zero Hunger since it directly copes with food insecurity by distributing meals. It also supports SDG 1: No Poverty as it gives the underprivileged communities fundamental resources, including food, clothes, and money.

Also, the program helps to achieve SDG 10: Reduced Inequalities because it targets those most vulnerable, including orphans and the economically disadvantaged. The educational and engagement programs, such as competitions, book and stationery distributions, also go in line with SDG 4: Quality Education, as they facilitate learning and development among children.

3.3.4 Process Flow:

Reaching Out to NGO (Donor Initiative)

Contribution

Beneficiary Selection

Planning of Activities

Implementation

Videos and photos Shared with Donors

3.4 Healthcare Initiatives

Through its healthcare programs, Souls of Humanity takes up initiatives that enhance access to basic healthcare services to underserved communities. It starts with the identification of remote regions with poor healthcare provision, including villages of Aganampudi and Lankalapalem. In line with this, the organization organizes and holds medical camps twice in a year, where the vulnerable groups are targeted.

These camps will offer simple health screening and preventive health services. In both villages, there were around 100 beneficiaries. Their services involve general health check-ups, vital checks like BMI, random blood sugar tests, haemoglobin tests and physical check-ups like heart rate, lungs test, ears, throat, and skin.

Besides medical camps, the organization has a medicine distribution program, where simple medicines like vitamins, pain relievers, antibiotics, muscle relief sprays are distributed at the camps. Specialized health camps, such as eye check-up and dental camps, are also held by the NGO and have helped about 30-35 people.

In addition, the organization organizes blood donation camps once in six months in part cooperation with other institutions like Mahatma Gandhi Cancer Hospital and Omni Hospitals. Donors normally attend the camps in numbers of about 40-50 though at times, some are deemed ineligible because of medical reasons. Emergency support is also provided by the NGO with volunteers organizing or giving blood to those in need in emergency situations depending on availability and matching.

3.4.1 Impact Created

The healthcare program has produced a notable effect in increasing the coverage to vital healthcare services in the underserved regions. On the output level, some 100 people have been served by the medical camps and 30-35 people have been given special care by eye and dental check-up. Moreover, 40-50 blood donors are invited to every blood donation drive to provide the population with blood in case of any urgent medical services. At the outcome level, the initiative will lead to a decrease in the early detection of health problems, raising awareness levels concerning health and hygiene, and access to simple medical care. Provision of crucial medicines lowers cost of accessing health care especially to the poor people in the society.

The blood donation drives are important in enhancing emergency healthcare support systems as well as creating awareness of blood donation. All in all, the program improves the health of the community, awareness of preventive care, and access to necessary medical care.

3.4.2 Impact Measurement

The effect of the program is mainly quantified through the following quantitative indicators and measures: the number of beneficiaries (100 people in medical camps), the rate of the camps (twice a year), the participants in the blood donation drives (40-50 donors) and the beneficiaries of specialized camps (30-35 individuals). These signs give a clear image of the extent and magnitude of the initiative.

Nevertheless, no systematic monitoring of outcome-based measures like a decrease in the prevalence of the disease, an increase in health status, or post treatment outcomes. Also, no records of long-term health benefits were detected in beneficiaries. Consequently, the impact assessment is more oriented towards service delivery and not on the long-term health outcomes.

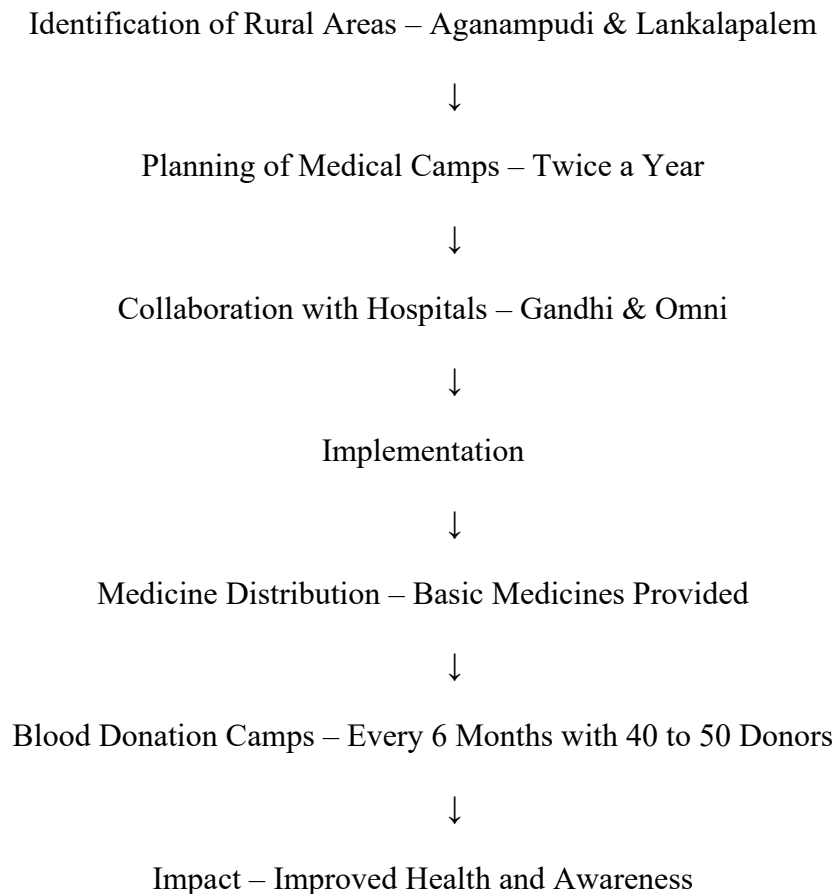

Activity	Indicator	Data
Medical Camps	Beneficiaries	100
Specialized Camps	Beneficiaries	30–35
Blood Donation Drives	Donors	40–50
Health Outreach	Camps/Year	2

3.4.3 SDG Alignment:

The healthcare activities of Souls of Humanity are mainly in line with SDG 3: Good Health and Well-being since the organization offers basic health services by conducting medical camps, distributing medicines, and donating blood. The initiative helps to get in time the development of health problems and better access to required healthcare services by visiting approximately 100 beneficiaries with the help of camps and organizing bi-annual blood donation drives.

This initiative also leads to SDG 10: Reduced Inequalities since it provides free healthcare services to rural and economically disadvantaged communities to minimise its financial and access provisions. Also, cooperation with hospitals like Mahatma Gandhi Cancer Hospital and Omni Hospitals indicate the conformity to SDG 17: Partnerships for the Goals, which increases the efficiency and coverage of the program.

3.4.4 Process Flow

3.5 Environmental Sustainability - Project Samraksha

Project Samraksha demonstrates the desire of the organization towards environmental protection and sustainable development. The project touches upon direct action and awareness raising due to the growing menace of pollution and environmental degradation.

The functions the organization performs are the beach cleaning drives, plantation programs and participating in the campaigns such as Swach Bharat nationally. These will be oriented towards pollution control, promotion of cleanliness, and natural resources conservation. Organic farming also encourages sustainable farming and reduces the use of detrimental chemicals.

Among the most significant components of the initiative is the removal of the non-biodegradable waste particularly in the areas where it is posing a threat to the environment and aquatic organisms. By combining awareness and action, Project Samraksha is an investor in the long-term environmental sustainability and encouragement of responsible behavior of the communities.

3.5.1 Initiative Process

Project Samraksha is an environmental sustainability initiative, which Souls of Humanity decided to take on to address the problem of pollution and promote environmentally conscious actions. The program will consist of two significant elements: monthly beach cleanup events and plantation programs, which will be carried out with the help of community engagement and awareness.

The beach clean-up activities are conducted once in a month along Visakhapatnam coastline collaborating with institutions such as Gayatri Vidya Parishad and Siva Sivani High School. There are approximately 50-60 volunteers per drive and 3-4 hours to complete each drive. In these drives, around 70 bags of plastic wastes which weigh about 80 kg are picked up.

One of the main characteristics of this initiative is the cyclic waste management. The recovered plastic is sold to recycling firms such as Evergreen Polymers at 40 per kg which will fetch an average of 3000-3500 per drive. This is used to reinvest in continuous projects and it forms a sustainable cycle whereby waste is used as a source of resources to fund more activities on the environment and in the society.

This is complemented with the plantation program which propagates about 2000 plant species in 25 villages like Anandapuram and Uppada. These consist of fruit bearing, vegetable and flowering plants as well as those that are planted in government schools and hospitals. Its aim is to enhance green cover as well as to facilitate livelihood opportunities to the rural communities.

3.5.2 Impact Created

The project has led to environmental and socio-economic impact. The output-level beach cleaning drives will remove approximately 80 kg of plastic waste each month which is contributing to cleaner coastal ecosystems. Community awareness and involvement in environmental protection is also better with the involvement of 50-60 volunteers per drive.

This project, at outcome level, reflects a circular economy idea, where the waste is not thrown away, but rather utilized to generate economic value and invested in social initiatives. This not only reduces the pollution to the environment, but also offers sustainable funding of the future activities.

Plantation project has resulted in supply of approximately 2000 plants that has contributed to the sustainability of the environment and supply of green cover. It also offers livelihoods, in that the beneficiaries will have an opportunity to earn some money selling fruits, vegetables and flowers. The long-term effect is however, not quantified to the full extent as the survival of the plants is not followed up.

3.5.3 Impact Measurement

Output indicators used to measure the impact of the initiative include the volume of plastic picked up (80 kg per drive), number of volunteers (50-60 per drive), and number of plants given (2000 plants). In addition, the revenues (around 3,000-3,500 per drive) received by recycling plastic are tracked and this is also another significant factor of the circular model in terms of finances.

Nonetheless, minimal monitoring of outcome-based measures, including decreased pollution rates, survival rates of plants and long-term benefits in livelihoods are monitored. Although the circular approach enhances sustainability, the lack of a systematic monitoring restricts the opportunity to assess the environmental impact in the long run.

Activity	Indicator	Data
Beach Cleaning	Plastic Collected (kg)	80
Community Participation	Volunteers/Drive	50–60
Recycling Model	Revenue (₹)	3,000–3,500
Plantation Program	Plants Distributed	2,000
Area Coverage	Villages	25

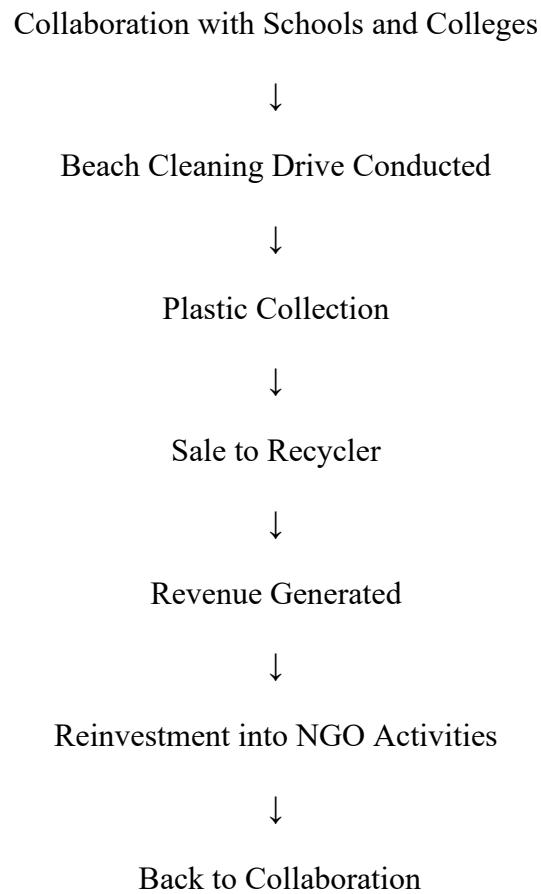

3.5.4 SDG Alignment:

Project Samraksha is directly connected with SDG 13: Climate Action as it aims to reduce the effect of environmental degradation through the organization of regular cleaning campaigns and development of sustainable behavior. By cutting down the amount of plastic waste by approximately 80 kg every month, pollution will be reduced and results in climate resilience.

The initiative also contributes to SDG 14: Life Below Water because the clean-up of the beach directly helps to keep out of the marine ecosystems the plastic materials, thereby saving the lives of the fish. Additionally, this plantation exercise will also contribute to SDG 15: Life on Land by increasing the green cover by planting around 2000 plants in the villages.

In addition, the project aligns with SDG 8: Decent Work and Economic Growth because the beneficiaries will have a livelihood source selling fruits, vegetables, and flowers of the plants provided.

3.5.5 Process Flow

3.5.6 Beneficiary Feedback

Lakshmi, a beneficiary of Anadapuram village provided her experience under the plantation program. She was given 15 flower plants of various kinds and she has been nurturing them. Gradually, she has begun to sell flowers planted on these plants, a little source of income to herself.

Her reaction illustrates that the initiative does not only contribute to environmental sustainability but also helps in generation of livelihood at the personal level.

3.6 Women Empowerment Initiatives

3.6.1 Initiative Process

One of the main areas that the Souls of Humanity are focusing on is the empowerment of women, which is done through programs like Project Red and Athmaraksha, which attempts to enhance health awareness, safety and confidence in young girls. The programs are implemented in approximately 25 villages, and the target population is the girls between the age of 10-16.

Project Red will focus on creating awareness on menstrual hygiene through the holding of bi-monthly meetings in different villages. These sessions would entail teaching about hygiene, how to use and dispose sanitary products and the health risks of poor menstrual hygiene. Besides the awareness, the organization also provides sanitary pads to the beneficiaries wherein more than 50 girls receive the support at a single session particularly in the rural setup and orphanages.

An added value to this initiative is Athmaraksha which provides self-defense training, taught by qualified professionals with help of volunteers. This program is also used to train over 50 orphanage girls on a regular basis. Awareness of personal safety, mental strength, and the concepts of good touch and bad touch are also part of the sessions to enable the participants to develop confidence and preparedness.

3.6.2 Impact Created

It has been an incredible impact of the program that it has targeted more than 1000 girls in different rural communities. At the output level, the program will provide frequent awareness, distribution of sanitary pads and self-defence training directly covering both health and safety requirements.

At the outcome level, Project Red leads to better menstrual hygiene awareness, and decreased stigma and better health practices in adolescent girls. Athmaraksha enhances confidence, self-defence and mental skills to ensure that girls are able to respond to tough situations.

Also, the project is important in eliminating social taboos and promoting free discourse on sensitive issues. In orphanages, it is the same (participation), in the villages, it is subject to social and cultural obstacles, that is, it is influenced and there are difficulties.

3.6.3 Impact Measurement

The program measures its impact in terms of output (such as the number of beneficiaries (1000+ girls), villages served (25), and the number of sessions (twice a month). The basic level is also covered by the number of girls being provided with sanitary pads and taking self-defence training.

However, there is no methodical evaluation of outcome based outcomes such as long term behavioral change, increase or decrease in hygienic behavior or change or increase in levels of confidence in the participants. As a result, the evaluation of impact is primarily motivated by the engagement and perceived changes rather than data-based analysis.

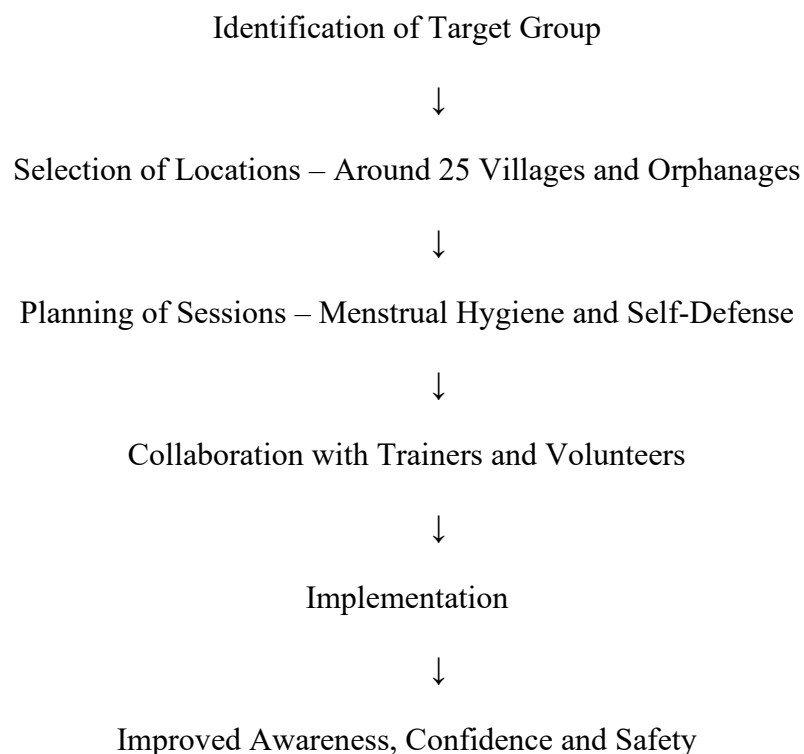

Activity	Indicator	Data
Awareness Programs	Beneficiaries	1,000+
Geographic Reach	Villages	25
Training Sessions	Sessions/Month	2
Session Outreach	Beneficiaries/Session	50+

3.6.4 SDG Alignment

The SDG 5: Gender Equality is closely related to the women empowerment activities of Souls of Humanity as it would be empowering adolescent girls through increasing their health awareness, confidence, and personal safety. Project Red will allow the organization to address the issue of menstrual hygiene, which will decrease the stigma, and provide girls with access to the required sanitary supplies. Athmaraksha goes even further to empower this by giving the girls skills of self defense and awareness to face the unsafe situations, a sense of independence and dignity is achieved.

It is also connected with SDG 3: Good Health and Well-being since awareness campaigns and sanitary pads on menstrual hygiene will decrease the risk of infection and increase health behaviours of more than 1000 beneficiaries. The emphasis on hygiene, health education, and preventive care directly contributes to the enhancement of physical and mental well-being. Moreover, the programs can be associated with SDG 4: Quality Education since the programs offer life skills education beyond the school. Issues such as hygiene, good touch and bad touch, and mental strength are some of the areas of education that enhance knowledge, confidence and decision making capacity in 1016 years of girls.

3.6.5 Process Flow:

3.7 Other Social Support Initiatives

Besides the formal programs, Souls of Humanity is also involved in numerous auxiliary projects that help it to meet immediate and emergency requirements. The organization is also instrumental in disaster relief, which means that the organization supports in case of such events like pandemics, floods, and accidents. The aid involves provision of food, medicines, oxygen concentrators and other vital supplies.

There are also other programs such as food bank programs, cloth distribution drives, raising awareness on sanitation and social problems and feeding of animals. The organization also offers dehydration fluids in times of extreme weather conditions and thus the vulnerable populations are well served.

Such activities bring to focus the flexibility and responsiveness of the organization in meeting various challenges. Souls of Humanity supports its humanitarian service and community welfare by providing a broad range of support in various areas.

4. FINANCIAL ANALYSIS OF THE ORGANIZATION:

4.1 Financial overview:

 Souls of Humanity		
Month	Income	Expenditure
Apr-2023	78,421	89,420
May-2023	69,801	78,960
Jun-2023	210406	145280
Jul-2023	70121	89360
Aug-2023	98481	122380
Sep-2023	105951	120628
Oct-2023	124351	116500
Nov-2023	365401	334390
Dec-2023	132901	887000
Jan-2024	126751	158210
Feb-2024	146551	189950
Mar-2024	156701	169200
Total	16,85,837	25,01,278

Total Income FY(23-24) : 16,85,837

Total Expenditure FY(23-24) : 25,01,278

We spent 8,15,441Rs excess in FY(23-24) in which 7,14,034Rs spent for SOH Vehicle and will be cleared in EMI's in next 5years.

We are running with 1,01,407Rs as negative balance

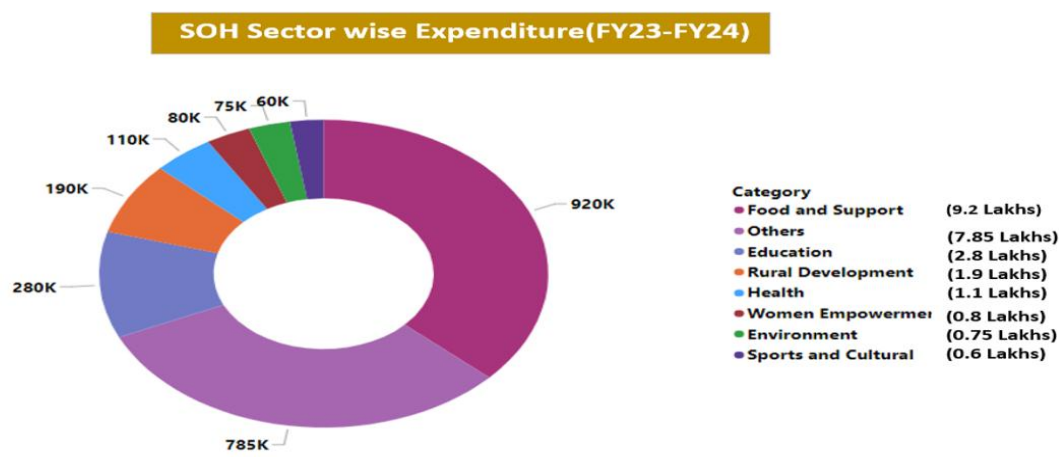

Souls of Humanity is a non-profit organization that runs on donations, and its financial framework is mostly based on external donations. The organization has the total income of ₹16,85,837 with a total expenditure of 25,01,278 in the financial year 2023–24, which leads to the deficit of 8,15,441. This implies that the organization operates on a deficit model of operations, that is, the expenses are higher than the income. The same shows at the monthly level. As an example, in January 2026, the organization had a contribution of 1, 61, 000 and an expenditure of 1,87,100 which resulted in a monthly loss of 26,100. This is indicative of a growing trend of increased expenditure in the effort to maximize outreach and service provision.

The annual deficit can be largely explained by the capital investment in a vehicle which is expected to be repaid over five years at EMIs of ₹7, 14,034. This implies that the organization is making investment in long-term working capacity as opposed to making pure operational losses.

When it comes to sources of funding, the organization is very much reliant on non-member donations with about 95 percent of its contributions (₹1, 53,500 out of 1, 61,000 in Jan 2026) being made by non-members. The NGO has managed to provide high impact of 2160 beneficiaries in one month and this has been facilitated by 556 volunteer hours, which is a high rate of resource efficiency and utilization despite financial constraints. In general, the financial analysis shows that the organization is run on a deficit and donor-reliant model, yet its impact

efficiency is high, yet to become more sustainable, the organization might need better financial planning and diversification of funding sources.

4.2 Sector-wise Financial Analysis

The sector-wise spending of Souls of Humanity indicates a distinct allocation strategy that puts priority-based allocation strategy where the allocation is done in relation to the immediate social needs and future development targets.

Food and Support

The sector with the largest amount of expenditure of about 9.2 lakhs is the Food and Support sector and it is the dominant in spending. This means that the organization gives utmost priority to fulfilment of basic needs, such as distribution of food, assistance to needy communities, and welfare programs.

This large allocation emphasizes a relief-based strategy as the immediate needs and hunger are given priority over other developmental areas. It also shows the magnitude and intensity of such activities that need constant funding.

Others (Administrative & Miscellaneous)

The second-largest category is “Others”, with an expenditure of around ₹7.85 lakhs. This probably involves administrative costs, logistics, transportation and operation costs.

The relatively large proportion of this category is an indicator that the organization experiences large supporting costs to maintain its operations, such as infrastructure and coordination. Although they do not directly produce impacts, these costs are critical to effective implementation of programs.

Education

Education sector represents about 2.8 lakhs of investment which is moderate investment in developing initiatives in the long run like tutoring schemes, giving out of educational materials and creation of awareness.

The reduced allocation in comparison to Food and Support indicates that education programs are not as capital-intensive and can be based on volunteer services more than on financial means.

Rural Development

The amount spent on the Rural Development is approximately 1.9 lakhs and this reflects spending on projects like development of skills, infrastructure, and livelihoods.

This distribution is a measure of a strategy of balance, in which the organization does not only aim at providing relief but also enhancing living conditions of rural populations in the long term.

Healthcare

Healthcare sector receives about 1.1 lakhs, and this will be used on activities like medical campaigns, supply of medicine, blood donation, and so on.

The comparatively low cost indicates that healthcare programs are economical and in many cases, they are funded by collaborations with hospitals and volunteers instead of having to make huge investments.

Women Empowerment

The Women Empowerment sector contributes to approximately 0.8 lakhs, which funds programs such as menstrual hygiene awareness, and training on self-defense.

In spite of limited financial allocation, the impact is high since these programs are based on awareness campaigns and training that do not demand much money but result in high social impact.

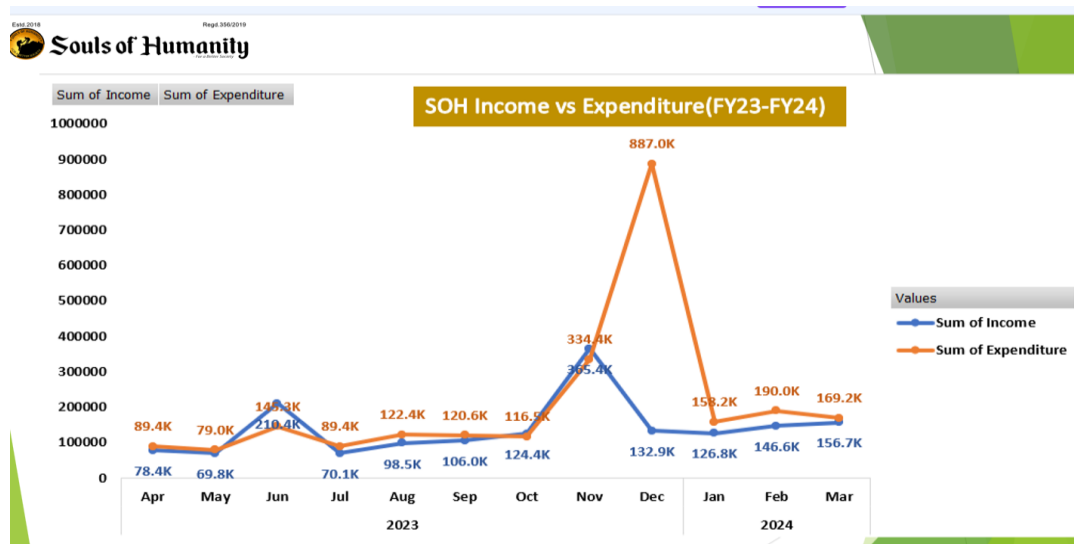

Environment

The Environment segment spends about ₹0.75 lakhs, and it encompasses the programs like beach cleaning and plantations. The small budget entry shows that it is based on a high-efficiency approach, with much of the environmental activities being instituted on a voluntary basis, needing very little funding yet creating an observable effect.

Sports and Cultural

The Sports and Cultural sector have the smallest allocation of approximately ₹0.6 lakhs, which implies that there is little yet targeted participation in activities like competitions, events as well as community engagement programs. This sector seems to be auxiliary, helping in social development but is not a priority of operations.

4.3 Income VS Expenditure

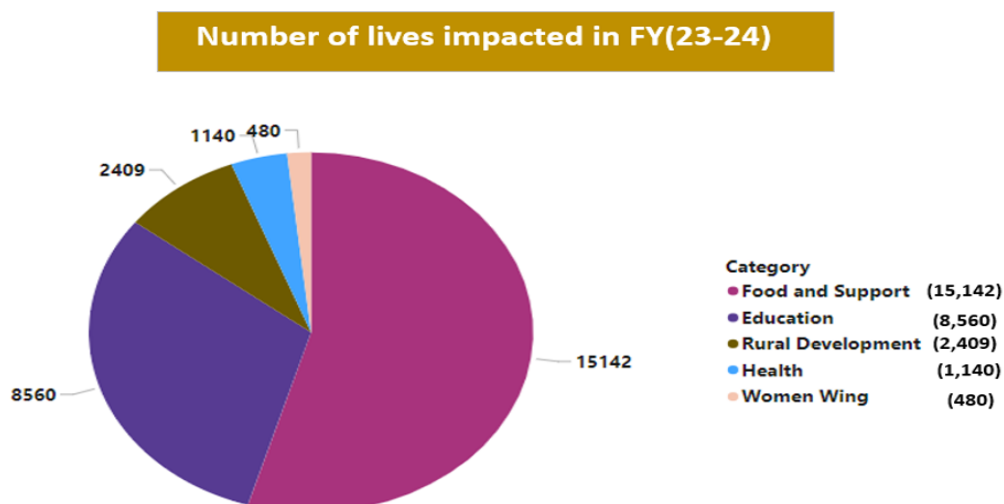

The financial trend of Souls of Humanity shows a quantitatively stable deficit model with the annual income of 16.85 lakhs much less than the annual expenditure of 25.01 lakhs and this translates into a deficit of 8.15 lakhs. It means that income covers only 67% of total expenditure, which is a significant funding gap. The same trend is observed at the monthly level. The budget shows a deficit of operation in 9 of 12 months, indicating that it is systemic and does not represent a single imbalance. The monthly average earnings are approximately ₹1.40 lakhs and average monthly expenditure is approximately 2.08 lakhs, showing that there has always been a difference of about 68,000 per month.

There is a large quantitative abnormality in December, in which expenditure goes up to around 8.87 lakhs as compared to the monthly income (1.32 lakhs), which is approximately 6.7 times higher. This one month contribution is over 35 percent of the total yearly spending with a clear indication of influence of capital expenditure (vehicle purchase) or mass growth.

Patterns of income are highly unstable with minimum of 69.8K (May) and maximum of 365.4K (November), so a difference of more than 5 times which indicates unstable and inconsistent donor inflows. On the other hand, the expenditure shows a comparatively lesser variability

(except in December), it is typically between ₹1.1 and 1.9 lakh which means that there are fixed operational commitments. In terms of financial efficiency, although there was a deficit, the NGO had an impact of 2160 beneficiaries per 1.87 lakhs of expenditure meaning that it had a high impact-to-cost ratio.

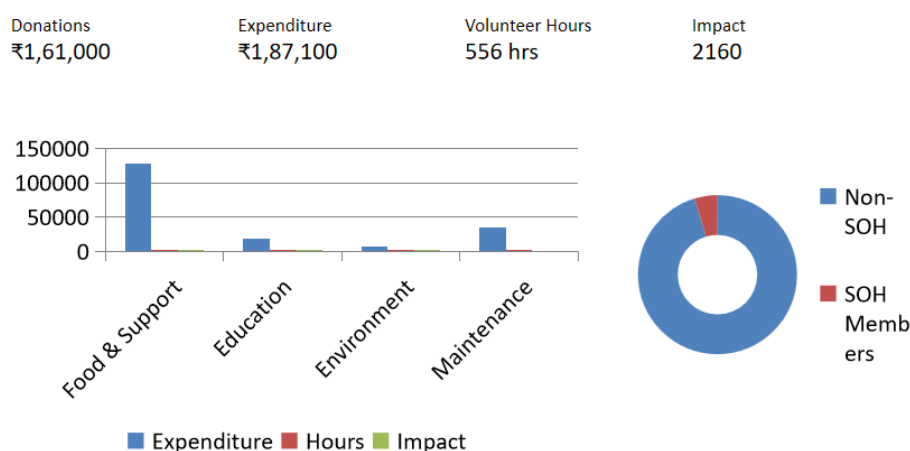

4.4 Number of lives impacted in FY (2023-2024)

The distribution of impact of the Souls of Humanity in FY 202324 is highly clustered around critical welfare areas with Food and Support representing the largest proportion of 15,142 beneficiaries (around 54%), and thus the largest contributor of total outreach. This is succeeded by Education with 8,560 beneficiaries (30%), which reveals high attention paid to the long-term developmental impact. Other sectors like Rural Development 2,409 beneficiaries (9%), Health 1,140 beneficiaries (4%), and Women Empowerment 480 beneficiaries (2%) have comparatively lower proportions.

4.5 Monthly Impact Analysis (January 2026)

SOH Impact Dashboard – Jan 2026

In January 2026, Souls of Humanity reached a total of 2160 beneficiaries, with most of the impact coming from Food and Support, which served 1178 people (55%). Second was environment followed by 900 beneficiaries (42%), then Education with 82 (4%). This indicates that it is very much concerned with instantaneous wellbeing, particularly with food-related assistance.

In terms of spending, Food and Support had the highest priority with a spending of ₹1, 28,000 (68%). Maintenance expenses of 34, 600 are evidence of the effort to run such activities. In comparison, Education (₹18,000) and Environment (₹6,500) had significantly lower financial inputs, which means that the mentioned sectors are operated in a cost-efficient way.

The most notable one is the Environment sector that has high impact with minimal expenditure. This is more evident in the instance of volunteering. The total number of hours spent on Environment and Food and Support was 280 and 228 respectively out of the total 556 hours. This shows that in as much as funding is more depended on in certain sectors, other areas have a high dependency on volunteer work. Overall, the trend is that of a balanced approach when the financial resources can be employed to support high-need sectors and the volunteer service can help to scale the impact in low-cost ones.

5. STAKE HOLDER ANALYSIS:

Stakeholder	Role	Key data / contribution	Influence	Influence
Beneficiaries	Receive services	2160 beneficiaries	High	Central to all activities; their needs determine program design. High outreach means that there is high social impact, yet it puts pressure on resource allocation and sustainability.
Team Members	Execute operations	580 members	High	Give continuity and stability of operation. The advantage of large team size is that it can be scaled, but coordination and efficiency in management is required.
Volunteers	Support implementation	556 hours	Medium	Great importance to cost-efficient operations. The high dependence lowers the cost but can cause discrepancy because of temporary involvement.
Donors	Provide funding	₹1,61,000 (95% External)	High	Primary financial backbone. The high reliance on external donors means it is susceptible to the changes in funding and should be diversified.

Partners	Collaboration & outreach	Project-Based tie-ups	Medium	Increase reach and sharing of resources. However, lack of long-term partnerships limits strategic growth and consistency in joint initiatives.
----------	--------------------------	-----------------------	--------	--

The stakeholder analysis highlights a highly interdependent model, where beneficiaries drive the impact, donors provide financial support, and volunteers along with team members ensure execution. While this structure enables efficient and large-scale outreach, the organization shows strong dependence on external funding and volunteer participation, which may affect long-term sustainability.

6. TRIPLE BOTTOM LINE ANALYSIS

6.1 People

Social aspect of the work of Souls of Humanity is the most powerful. In January 2026, the organization had a beneficiary figure of 2160 with majority of the beneficiaries being in food and support activities of 1178 beneficiaries, environment of 900 and education of 82. This shows a definite orientation towards satisfying the short-term needs such as food security and furthering with education and awareness activities.

Along with numbers, the organization is engaged in various sectors including healthcare, women empowerment, and rural development. Not only are these projects assisting in the provision of the basic needs, but also in increasing awareness, confidence and long-term well-being. A balance between relief and development is an indicator of broad and extensive social impact strategy.

6.2 Profit

Economic performance, when it comes to an NGO, is defined in terms of efficiency in the use of resources. In January 2026, the organization received ₹1, 61,000 and spent ₹1, 87,100, resulting in a deficit of ₹26,100. The annual level of income was 16.85 lakhs and expenditure was 25.01 lakhs which led to a bigger deficit.

However, the company is very efficient. The cost per beneficiary is not very high with 2160 beneficiaries being assisted in a month. This will be made possible by 556 volunteer hours that will save a lot of money. The use of recycling plastic and reinvesting the revenue also enhance the use of resources. Overall, the organization works on impact based approach where delivery of services is centralized to the cost of the organization, yet is efficient in its operational practices.

6.3 Planet

Environmental activities such as clean-up and plantation are taken care of. The environment sector has reached 900 beneficiaries in January 2026 and top volunteer hours were 280 hours. This implies that environmental projects are participatory as compared to financial projects.

The organization gathers approximately 80 kg of plastic each drive and provides almost 2000 plants to villages. Such initiatives help to minimize pollution and introduce sustainable activities. Simultaneously, community engagement and awareness are important in long-term environmental benefits.

This is an indication of a model whereby the environmental outcomes are realized by engaging and changing their behaviors instead of doing it with high financial investment.

7. ESG GOVERNANCE:

7.1 Environmental

With some of the programs such as beach cleaning and plantation programs by Souls of Humanity has been performing well in as far as environmental sustainability is concerned. The environment sector had 900 beneficiaries and the maximum volunteer contribution of 280 hours per beneficiary, which is a good involvement in the community. Such activities as picking up around 80 kg of plastic per drive and advocating recycling are a realistic way of curbing pollution. The revenue of the recycling is reinvested into other initiatives, which underlines a tendency towards the sustainable use of resources and recycling. Generally, the organization takes a combination of low-cost, high-participation model of the environment.

7.2 Social

The social dimension is most important about the functioning of the organization. Souls of Humanity served 2160 beneficiaries in January 2026, 1178 (55%) beneficiaries in Food and Support, 900 (42%) in Environment and 82 (4%) in Education. This allocation shows that there is a high priority on short-term wellbeing and basic services, particularly food security.

Moreover, the organization is engaged in healthcare, women empowerment and rural developments projects which engage even broader scopes of social issues like access to basic services, awareness and gender equality. Confidence building and social inclusion is also created with programs such as menstrual hygiene awareness, self-defence training. Another strength that the organization utilizes and would allow expansion of outreach and be cost-effective is the 556 volunteer hours. Generally, NGO is a high impact and community based social model.

7.3 Governance

In the area of governance, Souls of Humanity shows readiness to be open and engage stakeholders which is supported by the regular documentation of its functioning and communication with donors. The team received 1, 61,000 donations, around 95 percent of which were external, which means that the community is very dependent.

Its structure is functional to support its activities which are covered by about 580 team members and volunteers with 556 hours of volunteerism that helps it to execute its initiatives effectively. Yet, this is not true where impact measures are more qualitative and lack of structured measures to trace the results over time. Besides, organizational structure is loose and casual, which is conducive to adaptability, but can be detrimental to role definitions and scalability. Further refining of the governance effectiveness and sustainability would be achieved through reinforcing the impact assessment based on data, formal process and organization structuring.

8. CHALLENGES FACED

- Challenge in gathering relevant information regarding Corporate Social Responsibility (CSR) among staff members of companies such as ITC and HDFC, where a significant number of respondents lacked adequate knowledge concerning CSR programs.
- Lack of access to specific data concerning projects or programs, where specific programs were better represented in terms of detailed data.
- Lack of proper data management and documentation mechanism, resulting in fragmented data lacking any sense of cohesiveness.
- Lack of quantitative methods for measuring impact of interventions, whereby the effects of such programs were based on observation.
- Lack of understanding of monitoring and evaluation as a tool used for determining the effectiveness of projects and programs.
- Difficulty in obtaining financial data since there was no system for recording financial transactions.
- Scattered data from various programs, making it hard to compare results obtained from different programs.
- The prevalence of heavy reliance on oral communication makes data gathering quite challenging.
- Inability to monitor the progress of some interventions, especially in relation to behavioral change, increased income levels, and sustainability.
- Lack of an organized organizational structure and procedures.
- No systematic approach to data gathering and management.
- Use of volunteer staff hinders efforts at collecting reliable data.

9. RECOMMENDATIONS & ACTION PLAN

Recommendation	Problem Solved	Expected Outcome	Timeline	Priority
Structured Impact Measurement System	Absence of quantitative impact tracking of initiatives like Food Distribution, Environment, and Education.	Increased credibility; improved reporting; increased funding opportunities.	6-12 Months	High
Use Social Media to improve Data-based Impact Reporting (13.6K followers)	Little visibility of the impact of actions such as Food Drives, Beach Cleaning, and Women Empowerment programs.	More donors & more funds can be raised.	3-6 Months	High
Hire Financial Manager in Committee	Inadequate financial accountability and transparency for all NGO activities.	Greater transparency, enhanced management of funds; greater trust by donors.	6 Months	High
Standardize Documentation & Reporting System	Lack of consistency and fragmented data is particularly evident in Rural Development and Healthcare initiatives.	Easier analysis; better reporting accuracy and consistency.	3-6 Months	High
Develop Internal consciousness to Impact Measurement	The perception of the NGOs in different initiatives that track the impact is not critical.	Cultural shift towards data-driven approach.	Ongoing	High

10. CONCLUSION

The following tools were used in this assessment, including stakeholder analysis, financial analysis, and aligning with the concepts of Triple Bottom Line, ESGs, and SDGs, to evaluate the impact of Souls of Humanity. Based on available data, Souls of Humanity was able to reach 2160 beneficiaries during January 2026 using a financial resource base of ₹1.61 lakhs and volunteer resource base of 556 volunteer hours. The majority of impact generated by Souls of Humanity falls under the category of Food and Support (1178 beneficiaries), followed by Environment (900) and Education (82).

The trends that emerge from the analysis of financial and other operational aspects of Souls of Humanity show that the organization runs very efficiently and effectively using very lean resources. It includes spending ₹1, 28,000 on food-related initiatives and very low financial expenditure on other initiatives like environment, where there has been a huge impact generated.

However, the fact that there is a deficit of ₹26,100 every month shows that Souls of Humanity works on a principle where impact comes before anything else, which means that it prioritizes providing services above all, even above financial stability. On the other hand, some weaknesses were identified during this analysis, such as the absence of a system to measure impact, poor accounting practices, and informal governance.

In conclusion, Souls of Humanity is a goal-driven organization that interacts with the community and expands its activities. It needs to enhance its governance framework and adopt an impact measurement system to ensure sustainability.

11. INDIVIDUAL LEARNING & REFLECTIONS:

Dilleswari Doki

- The project was a practical experience of how NGOs work, and it made me see their practical issues, how they operate, and the difference between the theoretical and practical aspects.
- Realized that the CSR awareness is fundamental to all organizations as the communication with the corporate employee showed that they have limited knowledge of their own CSR practices, although they are involved in generating social impact.

- Discovered that most NGOs, even though they are busy making social impacts, are not aware of the measurement of impacts and how their impacts are well documented which constrains their capacity to show results, be transparent and raise funds.

Kanchi Sukanya

- This project did make a difference in my perception of NGOs and their activities. Previously, I have been of the view that social impact is more concerned with intentions, but as I read Souls of Humanity, I realized that the only way to impact something is by planning it, structuring it and making continued efforts.
- Among the most useful things I have learned was that such concepts as the Triple Bottom Line, ESG, and the United Nations Sustainable Development Goals.

S. Niteswara Sai

- I have also learned the significance of a powerful digital presence. An NGO may be doing a fantastic job, but it will not get the word out unless it does so well. Such items as good communication, frequent changes, and openness play an enormous role in the attraction of donors and volunteers.
- Accountability was another aspect that impressed me. You cannot simply tell that you are making impact you should demonstrate it by appropriate results and data. This project made me realize the need to be transparent and strategic in social work.

Reddy Hema Sree Sowmya

- This project reinforced my consciousness of the way in which NGOs like Souls of Humanity can utilize structured projects in the fields of education, health and community empowerment to attain a social impact. It also gave me skills in practicability in applying the Triple Bottom Line, ESG and SDG models to real life organization which refined my analytical skills.
- I have gained significant insight on the impact that a good digital presence and adequate communication can have in recruiting donors and volunteers. The analysis has given an understanding of the fact that it is not sufficient to have social impact but one must show

that there is impact by providing proof of impact in form of results. It is also essential to have transparency and strategy.

- I feel more connected with the concept of applying theory into practice as well as an increased sense of social responsibility.

Aditya Narayana Swain

- When we experience problems related to hunger, education, and livelihood in society, it shapes us into more responsible individuals. In the future, we naturally feel motivated to contribute and give back to society.
- The concept of SDGs (Sustainable Development Goals) may appear as just a framework set by the government, but when we genuinely work to solve real problems in rural areas, we unknowingly contribute toward achieving these goals.

HDFC BANK CSR REPORT (FY 2024–25)

1. INTRODUCTION

The CSR activities of HDFC Bank through its flagship program Parivartan indicate a grand and systematic way of social impact on a large scale in India. In FY 202425, the Bank realized a cumulative CSR spending of 1068 crore, which is delivered to around 28 states and 8 Union Territories with a total of 1056 crore beneficiaries, meaning that the Bank is widely geographically spread and outreach.

The effects of these initiatives can be noticed in various industries. Through Rural Development, the program has benefited more than 10,22,000 households in 8,590 villages, and development of 11,820+ water conservation facilities, which have helped in sustainable resource management and livelihood enhancement. Under the Sustainability and Environment, the Bank has enabled planting of more than 38,00,000 trees, installation of 51,050+ solar lights, and 13,340+ biomass stoves to encourage the use of clean energy and to preserve the environment. Moreover, within the Livelihood and Agriculture sector, 57,980+ kitchen gardens have been developed, which helped to generate income and secure nutrition on the household level.

The data, in general, represents the multi-sector, high-impact CSR model, in which financial investment of large proportions is balanced by the organized implementation and quantifiable results, which allow the development to be sustainable and inclusive.

2. OVERALL CSR PERFORMANCE (FY 2024–25)

Category	Indicator	Data
Financials	Total CSR Expenditure	₹1,068 crore
Outreach	Total Lives Impacted	10.56 crore people
Coverage	Geographical Reach	28 states and 8 UTs

3. SECTOR-WISE IMPACT DATA

Sector	Indicator	Data
Rural Development	Households Covered	10,22,000+
	Villages Impacted	8,590
	Water Conservation Structures	11,820+
Sustainability & Environment	Trees Planted	38,00,000+
	Solar Lights Installed	51,050+
	Biomass Stoves Deployed	13,340+
Livelihood & Agriculture	Kitchen Gardens Developed	57,980+

4. ANDHRA PRADESH CSR PERFORMANCE (FY 2024–25) – HDFC

The CSR efforts of HDFC Bank in Andhra Pradesh that it has undertaken as part of its flagship program Parivartan demonstrate a well-organized and geographically particular way of inclusive growth. The programs are meant to tackle major socio-economic issues in rural and semi-urban regions, but with particular emphasis on rural development, education, skill development, healthcare, financial inclusion, and natural resource management.

In FY 202425, the initiatives have reached 47,350+ beneficiaries, which proves to be a targeted outreach in the state. There is a strong focus on agriculture and rural livelihoods where more than 43,000 farmers are being supported and large parcels of land are being irrigated and subjected to sustainable farming methods. This shows that there is the strong commitment of enhancing the productivity of agriculture, income generation and environmental sustainability.

Besides this, the organization has been involved in education development, providing scholarships, smart classrooms and school infrastructure, which have helped thousands of students. The skill development programs have promoted employment and entrepreneurship

and the health and sanitation programs have promoted the health and hygiene status of the community.

On the issue of financial inclusion, outreach has also been done on more than 7.24 lakh people facilitating the creation of awareness on banking and financial systems. Solar installations and water conservation structures are some of the environmental initiatives that emphasize on sustainable management of resources.

Sector	Indicator	Data
Overall Impact	Total Lives Impacted	47,350+
Rural Development	Farmers Supported	43,243+
	Acres Under Irrigation	1,973+
	Acres Under Chemical-Free Farming	5,286+
Education	Scholarships Provided	1,451+
	Students Impacted (Smart Classes)	25,250+
	Smart Schools Developed	101+
Skill Development	Individuals Trained	1,078+
	Community Enterprises Supported	399+
Healthcare & Hygiene	Villages with Waste Management Systems	18+
Financial Inclusion	Financial Literacy Reach	7.24 lakh+
Natural Resource Management	Solar Lights Installed	170+
	Water Conservation Structures	13+

Interpretation

- Total Lives Impacted (47,350+) shows the total size of outreach and people who are directly affected by CSR activities.
- Farmers Supported (43,243+) is an indicator of a high level of interest in enhancing agricultural livelihoods and rural communities.
- Acres under Irrigation (1,973+) indicates a higher access to water resources, which results in a higher agricultural productivity and stability of income.
- Acres under Chemical-Free Farming (5,286 +) has promoted the use of environmental-friendly farming methods and protection of the environment.
- The number of scholarships available (1,451+) represents the support given to the economically disadvantaged students to enhance their access to education.
- The number Impacted Students (25,250+) represents mass educational outreach and improvement of education accessibility.
- Smart Schools developed (101+) is an infrastructure development that is designed to advance the standards of education.
- Individuals trained (1,078+) accentuates the work on skill development and employability.
- Community Enterprises Supported (399+) is a sign of local entrepreneurship and income creation.
- Villages with waste management systems (18+) shows the positive changes in the state of sanitation and community health.
- Financial Literacy Reach (7.24 lakh +) indicates broad-based, financial inclusion and awareness.
- Solar Lights Installed (170+) means the use of renewable energy and better access to sustainable energy.
- Water Conservation Structures (13+) are attempts to manage the resources and achieve environmental sustainability in the long-term.

5. CONCLUSION

The CSR activities under the Parivartan program at HDFC Bank are an example of a very structured, large scale, and data-driven approach to social impact. The Bank (with total spending of 1068 crore) has reached 10.56 crore beneficiaries with its model that combines

financial prowess with quantifiable results in sectors like rural development, education, healthcare and sustainability.

The Andhra Pradesh data also include the implementation of this larger strategy at the regional level, which has delivered 47,350+ beneficiaries with specific interventions in the areas of agriculture, education, skill building and financial inclusion. Both indicators use beneficiary-based and output-based indicators reflect a broad and clear impact measurement strategy.

It should be mentioned that the presented insights are derived based on the secondary data, obtained through the official CSR reports, sent by email to the organization, especially since the first interactions with employees revealed the lack of knowledge about CSR activities among the employees, at the operational level.

In general, the CSR of HDFC Bank constitutes a governance-based and scalable framework, in which a formalized application, standardized measurement processes, and ESG- and SDG-alignment bring transparency, accountability, and sustainability in the long-term.
